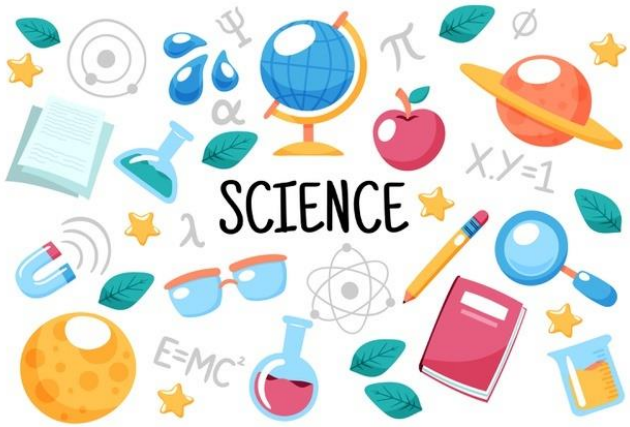
Our Vision

At St Oswald's the vision and aims (intent) of Science for our children are to:

. Inspire children to develop a strong passion for science and to think like scientists by working scientifically so that they can think independently and raise questions about the world around them.

. Equip children with excellent scientific knowledge and understanding to embrace and challenge the ideologies of an ever-evolving future. Children will embrace cultural differences within the field of science.

. Succeed as a scientist by developing children's ability to confidently and competently explore and investigate scientific concepts and to apply and develop the full range of practical skills required.



St Oswald's CE
Primary School
Inspire Embrace Succeed

Our Principles

. Children raise questions and refer to previous experiences and projects.

. Children are engaged and enthused by their learning.

. Children can make links between what they are learning and the wider world

. Children have enquiry minds and use previous/new knowledge to inform their responses.

. Children are enthused by their learning and are eager to carry out investigations.
